

Adaptive Solutions is Rapidly Building a Name in the Education Space

Adaptive Solutions has been consistently earning an A+ in the Education field. The California based consulting firm focuses on Performance Management, Business Intelligence and Data Warehousing, which, as a result of federal laws like the No Child Left Behind Act (NCLB) and increased competition among educators, are becoming increasingly important to schools, colleges and universities.

Adaptive Solutions' value proposition is in the caliber of their people and the expertise they bring to the institutions they work with. Because they are not tied to any specific product vendors they are able to go beyond any single technology to integrate systems and design solutions to meet the exact needs of their customers. Often times their customers have already invested in ERP or other software packages but are still unable to provide their end users with the information they need in a timely manner and in a format that they can easily understand. Adaptive Solutions resources bring a perfect blend of business and technical skills to the projects.

“Many educational institutions have several, complex data structures that need to be integrated in order to be able to answer questions like “are we attracting and recruiting the right students” or “are we maximizing our fundraising efforts”. Because they are often on tight budgets we typically find ourselves implementing in stages. That way we can deliver value and do not compromise the integrity of the system” - Andrew Taft – Senior Consultant for Adaptive Solutions

“Adaptive recognizes that regardless of the applications: Admissions, Advancement, Student Data, Finance, Human Resources or any combination it's important that the users have consistent and reliable information and that they are able to get it quickly. Adaptive gets it done every time.” – Dan Murphy , Cognos Corporation
